

Request for Proposals

\$5000+ per acre growing Great Mullein.
20+ acres wanted in cultivation - any plot over ½ acre considered.
May, 2022

Get 20% down in advance on signing.

Mullein is an easy to grow, low maintenance cash crop that is drought tolerant.

Demizine Technology is accepting proposals from certified organic farms for production of Great Mullein, *Verbascum thapsus*.

Demizine is prepared to offer \$0.35 cents per flowering stalk. The plant grows about 60cm in diameter. With a modest harvest you can expect \$5000/acre from a field that would otherwise be used for grain.

AND

An additional (optional) \$.10 per clipped root if parties are interested - the root is shallow growing and modest in size.

Great Mullein is

- Biennial (we are looking for the flower stalk, which occurs in the 2nd year).
- Very drought tolerant, but also responsive to good soil and irrigation.
- Prolific, making a great number of tiny long-lived seeds but is harvested prior to seeding. It is also easy to kill with tillage and not usually considered a problematic weed.

We had fun growing this plant on Salt Spring Island last year and now we need to expand the acreage with some contracts.

Demizine Technology is able to provide organic certifiable coated seeds to anyone interested in growing this plant.

Please contact James@phytochemconsulting.ca to express interest and schedule a phone or zoom conversation.
